

ELIJAH C. AGNEW

CLOUD SECURITY ENGINEER

Virginia Beach, VA • 757-402-0182 • elijahagnew912@gmail.com • ecagnew.github.io

SUMMARY

Cloud Security Engineer securing multi-cloud (Azure, AWS, GCP) environments through Infrastructure-as-Code policy enforcement, Kubernetes and container security, and CNAPP/SIEM integration. CISO Award winner for container supply-chain work that saved \$7.5M and significantly reduced enterprise attack surface; author of 250+ CIS-aligned Prisma Cloud policies securing a 180+ subscription Azure footprint and rolled out org-wide Terraform Cloud runtask gating across ~600 workspaces.

EDUCATION

New York University — M.S. in Cybersecurity

Expected May 2027

GPA: 4.0 • New York, NY

Purdue University — B.S. in Cybersecurity, Minor in Forensic Science

May 2024

GPA: 3.69 • West Lafayette, IN

EXPERIENCE

Cloud Security Engineer — Humana

May 2023 – Present

Progressed from Cloud Security Intern to Full-Time Engineer (Jun 2024)

- **Won the Humana CISO Award** as a top contributor to the Humana Certified Registry (HCR), an enterprise initiative that migrated teams from unvetted external images to vetted, CVE-free internal base images — **saving \$7.5M, reaching ~90% organizational adoption, and significantly reducing Humana's attack surface.**
- Developed core HCR automation, including the KEDA ScaledJob and container wiring for the full scanning workflow, deploying the event-driven workload to Kubernetes for elastic, on-demand image scanning.
- Built a containerized scanner that validates extracted images against Prisma Cloud trust groups and automatically scans via TwistCLI for vulnerability and compliance, plus a PR commenter container delivering actionable remediation before merge.
- Implemented CI/CD pull-request scanning for Dockerfiles, Docker Compose, and Kubernetes manifests to enforce approved base-image usage and block external images.
- Authored Prisma Cloud container workload protection (CWP) policies — including admission-control and vulnerability/compliance gates — to harden container workloads in CI and reduce organizational attack surface.
- Authored 250+ CIS Benchmark-aligned Prisma Cloud CSPM/IaC configuration controls (build-time and runtime) across Azure, AWS, and GCP, reducing attack surface due to misconfiguration and expanding posture visibility
- Developed automated remediation CLIs for those controls, auto-correcting non-compliant cloud resources and sharply reducing manual intervention.
- Integrated Prisma Cloud RunTask for Terraform Cloud that gates **~600 GCP workspaces org-wide**, blocking any deployment whose Terraform fails IaC compliance policy — enforcing policy-as-code at plan time (shift-left).
- Built policy-as-code controls across Terraform, CloudFormation, Bicep, and ARM, embedding security checks directly into multi-cloud CI/CD pipelines.
- Configured Prisma Cloud detection and alerting (e.g., new AKS/GKE cluster provisioning), routing alerts and incidents to the vulnerability management and incident response teams for triage.
- Integrated Prisma Cloud with Splunk SIEM for centralized audit/remediation events and real-time compliance dashboards, and automated Terraform workspace compliance metrics via Azure DevOps pipelines.

IT Risk & Compliance Intern — Humana

Aug 2022 – May 2023

- Drafted bi-weekly governance metrics monitoring enterprise IT controls and tracking Issues & Opportunities (IOP), supporting organization-wide risk and compliance oversight.
- Built an Excel/VBA script that automated the bi-weekly reporting process, cutting manual effort and improving reporting turnaround.

Penetration Testing Intern — Humana

May 2022 – Aug 2022

- Conducted full-lifecycle web-application penetration tests on internal and external Humana resources using Burp Suite, identifying and documenting exploitable vulnerabilities.
- Reviewed application source code for security weaknesses and communicated findings to the appropriate teams to drive timely remediation.

Teaching Assistant, System Administration — Purdue University

Aug 2022 – May 2024

- Taught networking labs (IP, DNS), ran office hours, graded assignments, and proctored exams.

SKILLS & CERTIFICATIONS

CNAPP & Cloud Security: Prisma Cloud — CSPM, CWP, IaC Security (RunTask), trust groups; TwistCLI; Splunk SIEM; CIS Benchmarks

IaC & CI/CD: Terraform, Terraform Cloud (TFC), Bicep, CloudFormation, ARM, Azure DevOps Pipelines

Containers & Orchestration: Kubernetes, KEDA, Docker, Helm

Languages: Python, PowerShell, C#, C

Certifications: AZ-900, AZ-104, Terraform Associate, KCNA, Security+, Splunk Core Certified User; CKA & CKS (in progress)
